TITLE 46—SHIPPING

BUREAU OF MARINE INSPECTION AND NAVIGATION

SUBDIVISION OF RIVER PASSENGER VESSELS; APPROVAL OF MISCELLANEOUS ITEMS OF FIRE EQUIPMENT

Pursuant to call under authority of Section 4405 of the Revised Statutes by the Hon. J. M. Johnson, Acting Secretary of Commerce, a special meeting of an Executive Committee of the Board of Supervising Inspectors, consisting of R. S. Field, Director; George Fried, Supervising Inspector of the Second District; and C. W. Willet, Supervising Inspector of the Sixth District, met in the office of the Director, Bureau of Marine Inspection and Navigation, Department of Commerce, Washington, D. C., on July 26, 1938. The following resolutions were unanimously adopted.

[Resolution No. 4262]

IN RE: SUBDIVISION OF RIVER PASSENGER VESSELS

Resolved, That under authority of Sections 4405, 4417 and 4426, R. S., Rule III, Rivers, General Rules and Regulations, be and hereby is amended by adding the following new section to be known as section 50:

Every new mechanically propelled vessel of more than 75 gross tons carrying passengers for hire shall have a sufficient number of transverse watertight bulkheads so that the vessel will remain afloat and have positive stability in the event any one main compartment is flooded.

A forepeak or collision bulkhead shall be fitted and located not less than 5 per cent of the length of the ship, and not more than 10 feet plus 5 percent of the length of the ship from the bow at the load water line.

In vessels where the propelling machinery is below the main deck one bulkhead shall be fitted at the forward end of the machinery space (which includes boiler space) and one bulkhead shall be fitted at the aft end of the machinery space. Other transverse bulkheads shall be so located as to meet the above requirements of subdivision and stability.

Main transverse bulkheads shall not be stepped, but may be recessed. No recess shall be fitted nearer the vessel's side than one-fifth of the vessel's beam amidships measured at right angles to the center line at the level of the water line on which the subdivision is based.

Bulkheads shall extend to a deck whose distance above the load waterline is suf-

ficient to enable the subdivision and stability requirements to be met with a fair margin of safety.

If the distance between two adjacent main transverse watertight bulkheads is less than 10 feet plus 2 per cent of the vessel's length, measured between perpendiculars at the extremities of the vessel's load water line, only one of these bulkheads shall be regarded as forming a boundary of a main compartment.

Existing vessels shall comply with the above rules unless it can be shown by the owners that their application is impracticable and unreasonable.

(Effective as to new vessels immediately, as to existing vessels April 15, 1939.)

[Resolution No. 1511-94]

UNITED STATES CIVIL SERVICE COMMISSION.

CONDITION OF THE APPORTIONMENT AT CLOSE OF BUSINESS SATURDAY, JULY 30, 1938

Important.—Although the apportioned classified civil service is by law located only in Washington, D. C., it nevertheless includes only about half of the Federal Civilian positions in the District of Columbia. Positions in local post offices, customs districts, and other field services outside of the District of Columbia which are subject to the Civil Service Act are filled almost wholly by persons who are local residents of the general community in which the vacancies exist. It should be noted and understood that so long as a person occupies, by original appointment, a position in the apportioned service, the charge for his appointment continues to run against his State of original residence. Certifications of eligibles are first made from States which are in arrears.
